Apps To Protect Your Smartphone

There are a multitude of applications to protect the integrity of your smartphone. Many of these applications are free and can be divided into two distinct categories for the iOS and Android operating systems.

These apps are less than \$10 and can help you protect your information in the event of a loss or a theft.

Your iPhone

Encrypt It

App: Wickr by Wickr, LLC (free)

This is a free application made by a team of security experts who believe that private communications are a universal human right. Spreading their belief for free, Wickr sends self-destructing messages to other Wickr users around the world using no trace. This Inspector Gadget-like app allows the sender to control the message by deciding who sees it. This application has military grade encryption and deletes metadata while being fully integrated to send PDF's and images from Box, Dropbox, and Google Drive.

Social Media

Lock It

App: Splash ID by SplashData (free)

Store and lock sensitive information such as usernames, passwords, credit card information, account numbers, registration codes, and prescriptions etc. without the fear of breach of privacy. This app allows the user to create unlimited customized records and categories. With the strong 256-bit Blowfish encryption, backup and wireless sync, automatic password generation, anti-fishing URL icons and manual IP address synchronization, your sensitive information will be hack-free.

4.5/5 Stars

Secure It

App: mSecure by mSeven Software, LLC

This app is your \$10 insurance policy for your iPhone. If you have mSecure on your iPhone, your data is secure in the event of a loss or theft. Data such as bank account numbers, social security numbers, and website log ins are protected. How does it work? This app has 256-bit Blowfish encryption, auto-lock, password generator, cloud data protection, free backup utility, e-mail attachment backup/restore and optional self-destruct.

Track It

App: Find My iPhone by Apple (free)

Here is a way to find your lost iPhone, using another iOS device! Simply download this app onto any Apple device, open it and sign in with your Apple ID. Find My iPhone will help you locate your missing device on a map, play a sound, display a message, remotely lock your iPhone, or erase all of your data.

Prevention

Prevention is key; for less than \$10 you can save more than \$600 in replacement costs alone. This does not include the time spent re-entering your data and changing all of your passwords

and account numbers. A privacy breach is a serious issue and the above apps are a way to prevent such a breach.
